

Dear Prof. Dr. Baurès,

Thank you for inviting us to clarify the issues raised by yourself and Reviewer 2.

We realized that the presentation of this manuscript could give rise to the impression that the main thrust of this project was behavioral in nature. We want to stress that we see its merits in the modelling and simulations part, rather than in a re-analysis of our previous results. To make this clearer to the reader, we all but removed the methods section and only maintained a few rudimentary marks the reader needed to understand the type of data we were using for simulations.

Sincerely,

Björn Jörges
